5 A flint wheel lighter with a safety device, comprises a casing, a fuel
container disposed in the casing, a vent assembly, an ignition assembly, and
a windproof hood above the fuel container, the ignition assembly is
arranged on the side opposite to the windproof hood. Said ignition
assembly comprises a press plate, a flint, and a flint wheel. A bent safety
rod rotatable with the flint wheel is disposed on the side surface of said
flint wheel, with both ends of two sections of said bent safety rods
10 protruding out of the rim of the flint wheel. In a safe mode, the end of one
section butts against the inner surface of the top cover of the windproof
hood, and the end of the other section lies over the flint wheel. The flint
wheel lighter with safety rod provided by the present invention can
effectively control the operation of the flint wheel by the safety rod, so as
15 to prevent fire disasters and accidents caused by children playing with the
flint wheel.
